The Risk of Good Enough Data

- The world of private investing is full of data but it is often unusable.
- Inconsistent formats, missing details, and manual errors prevent a clear view of performance.
- It creates a liability for clients and a bottleneck for the business.

A Closer Look at the Risk

Data Gaps

Key columns are riddled with missing values, leaving crucial information up to chance

Inconsistent Values

The VALUE column is a mix of dollars and thousands, making financial analysis impossible

Unstructured Chaos

Related data is scattered across multiple files, forcing a manual, time-consuming join

The Automated Path to Data Integrity

My role is to be the Data Quality Associate who builds a foundation of trust. I developed an automated pipeline to transform this raw data into a reliable, single source of truth.

My Solution: The Python Pipeline

Building on a Solid Foundation

Financial Accuracy
All VALUE metrics are normalized, enabling confident, reliable analysis.

Complete Data
Critical gaps are filled, providing a complete picture of holdings and reports.

Actionable Insight
The data is unified into a single, clean file, allowing teams to focus on strategy, not manual work.

Why I'd Love to be Part of the Mission

I absolutely love the idea behind creating this platform of becoming the one stop destination in the alternative investments landscape by through technology and collaboration.

My project was a small taste of my passion for the kind of work that makes that mission possible.

Thank you! I would love the opportunity to contribute to the future you're building.

THANK YOU
